

## APARTMENT BUILDING

# ALETSCH CAMPUS NATERS

The modern architecture references the traditional timber construction of the old village and takes account of sustainability, which has symbolic importance given the immediate proximity to the Aletsch Glacier. The Aletsch Campus illustrates the persuasive synergies that come from using timber in combination with concrete. The classic hybrid construction consists of skeleton structures in reinforced concrete with insulating timber wall elements.

Project owner	AXA Leben AG
Architect	OMG Architekten AG et N4 architects
Engineering	Renggli AG
Year	2013 - 2015
Standard	Minergie
Construction	Hybrid construction
Renggli's responsibility	Timber construction
