

APARTMENT BUILDING

ZÜRCHER FREILAGER ALBISRIEDEN

The three long buildings at the former Freilager site in Zurich represent a milestone in timber construction: they illustrate that timber can be a competitive choice in major projects. The architects' chosen ground plan typology proved ideally suited to construction using timber elements. The hundred-fold repetition of the same elements made timber highly competitive – both financially and in terms of build time.

Project owner	Zürcher Freilager AG
Architect	Rolf Mühlethaler Architekt BSA SIA
Engineering	Indermühle Bauingenieure GmbH
Year	2015
Standard	Minergie-P-Eco
Construction	Timber construction
Renggli's responsibility	Timber construction
